

Session 2.

1. Create a new React app using Create React App, open App.js, and replace its content to display a JSX heading that says 'Welcome to React JSX!'.
2. Write a functional component called UserGreeting that takes a username prop and displays 'Hello, {username}!' using JSX. Render it in App.js with your own name as the username.
3. Convert the UserGreeting functional component into a class component named UserGreetingClass that also takes a username prop and displays the same greeting. Render both versions (functional and class) in App.js to compare.
4. Build a MiniProfile functional component that shows a user's display picture (use any image URL), name, and a short status message using JSX. Use this component to display your own mini profile like Instagram.
5. Refactor your MiniProfile component to ensure all JSX tags are properly closed and wrapped, and that no invalid HTML is used.
Hint: If you get any errors, check for missing tag closures or incorrect nesting in your JSX.

Answer : -

Answer:- App.jsx

```
import UserGreeting from "./UserGreeting";
import UserGreetingClass from "./UserGreetingClass";
import MiniProfile from "./MiniProfile";

function App() {
  return (
    <div>
      <h1>Welcome to React JSX!</h1>

      <UserGreeting username="Nena Ram" />

      <UserGreetingClass username="Nena Ram" />

      <MiniProfile
        image="https://images.unsplash.com/photo-1500648767791-00dcc994a43e?w=300"
        name="Nena Ram"
        status="Learning React and building awesome projects 🚀"
      />
    </div>
  );
}
```

```

    />
  </div>
);
}

export default App;

```

2. Answer:-

```

const UserGreeting = ({username}) => {
  return (
    <div>
      <h1>hello {username}</h1>
    </div>
  )
}

export default UserGreeting

```

3. UserGreetingClass.js

```

import React, { Component } from "react";

class UserGreetingClass extends Component {
  render() {
    return (
      <h2>Hello, {this.props.username}!</h2>
    );
  }
}

export default UserGreetingClass;

```

4. MiniProjext.jsx

```

function MiniProfile({ image, name, status }) {
  return (
    <div
      style={{
        width: "300px",
        border: "1px solid #ddd",
        borderRadius: "10px",
        padding: "15px",
        marginTop: "20px",
        textAlign: "center",
      }}
    >

```

```
>  
  <img  
    src={image}  
    alt={name}  
    width="120"  
    height="120"  
    style={{  
      borderRadius: "50%",  
      objectFit: "cover",  
    }}  
  />  
  
  <h2>{name}</h2>  
  
  <p>{status}</p>  
</div>  
>  
);  
}  
  
export default MiniProfile;
```
