

Session 4.

1. Create a new React component called LikeButton that displays a heart icon and a count starting at 0; use the useState hook to increment the count by 1 each time the button is clicked.
2. Build a Flipkart-style cart item quantity manager: in a CartItem component, display the item name and quantity, and add '+' and '-' buttons to increase or decrease the quantity using useState.
3. Create a SongVote component for a Spotify playlist where users can upvote or downvote a song; display the current vote count and update it using useState when the up or down arrow is clicked.

Hint: Prevent the vote count from going below zero.
4. Build a Zomato-style rating selector: display 5 stars, and when a user clicks on a star, highlight all stars up to that one using useState to track the selected rating.

Answer: -

LikeButton.jsx

```
import { useState } from 'react';
import { FaHeart } from 'react-icons/fa';

const LikeButton = () => {
  const [state, setState] = useState(0);
  return (
    <div>
      <h1><FaHeart className='' />{state}</h1>
      <button onClick={()=>setState(state + 1)}>Clicked</button>
    </div>
  )
}

export default LikeButton
```

CartItem.jsx

```
import { useState } from 'react';
import { FaMinus, FaPlus } from 'react-icons/fa';
```

```

const CardItem = () => {
  const [state, setState] = useState(0);
  return (
    <div>
      <h1>Card Items</h1>
      <div>
        <h1>Iphone : <span>{state}</span></h1>
        <div className='flex gap-1.5'>
          <button onClick={() => setState(state - 1)}><FaMinus
/>></button>
          <button onClick={() => setState(state + 1)}><FaPlus
/>></button>
        </div>
      </div>
    </div>
  )
}

export default CardItem

```

SongVote.jsx

```

import { useState } from 'react';

const SongVote = ({ songName = 'Spotify Track' }) => {
  const [votes, setVotes] = useState(0);

  const handleUpvote = () => {
    setVotes(prev => prev + 1);
  };

  const handleDownvote = () => {
    setVotes(prev => Math.max(0, prev - 1));
  };

  return (
    <div>
      <h2>{songName}</h2>
      <p>Votes: {votes}</p>
      <button onClick={handleUpvote}><▲ Upvote</button>
      <button onClick={handleDownvote}><▼ Downvote</button>
    </div>
  );
};

```

```
export default SongVote;
```

StarRating.jsx

```
import { useState } from 'react';

const StarRating = () => {
  const [rating, setRating] = useState(0);
  return (
    <div>
      <h2>Rate this song</h2>
      <div style={{ display : "flex", gap : "0.5rem", cursor: 'pointer'
    }}>
        {[1, 2, 3, 4, 5].map((star) => (
          <span
            key={star}
            onClick={() => setRating(star)}
            style={{
              fontSize: '2rem',
              color: star <= rating ? '#f59e0b' : '#cbd5e1',
            }}
          >
            ★
          </span>
        ))}
      </div>
      <p>Selected rating: {rating}</p>
    </div>
  );
};

export default StarRating;
```

App.jsx

```
import CardItem from "../Exercise/CardItem"
import SongVote from "../Exercise/SongVote"
import StarRating from "../Exercise/StarRating"

// }

const App = () => {
  return (
    <>
```

```
    <LikeButton />
    <CardItem />
    <SongVote />
    <StarRating />

  </>
)
}

export default App
```
