

Session 9.

1.Install react-router-dom in your existing React app and set up BrowserRouter in your App.js file to enable routing.

2.Create three components: HomePage.js, DealsPage.js, and CartPage.js. Configure Routes in App.js so that visiting /, /deals, or /cart shows the correct component.

3.Add a navigation bar using NavLink that lets users switch between Home, Deals, and Cart pages, and highlight the active link with a different color.

Hint: Use the 'activeClassName' or 'style' prop of NavLink to apply styles to the active link.

4.Simulate a Flipkart-style navigation: add a NotFound.js component and configure a route so that any unknown path shows a '404 - Page Not Found' message.

Answer:-

1.

Step 1: Install React Router :-

npm install react-router-dom

HomePage.jsx

```
const HomePage = () => {  
  return (  
    <div>HomePage</div>  
  )  
}  
  
export default HomePage
```

DealsPage.jsx

```
const DealsPage = () => {  
  return (  
    <div>DealsPage</div>  
  )  
}
```

```
export default DealsPage
```

CartPage.jsx

```
const CartPage = () => {  
  return (  
    <div>CartPage</div>  
  )  
}  
  
export default CartPage
```

Nopage.jsx

```
const NoPage = () => {  
  return (  
    <div>404 - Page Not Found</div>  
  )  
}  
  
export default NoPage
```

Navbar.jsx

```
import { NavLink } from "react-router-dom";  
  
const Navbar = () => {  
  return (  
    <nav  
      style={{  
        display: "flex",  
        gap: "20px",  
        padding: "10px",  
      }}  
    >  
      <NavLink to="/"
```

```

        style={({isActive})=>({color: isActive ? "red" :
"black"}})}>
            Home
        </NavLink>

        <NavLink
            to="/dealspage"
            style={({isActive})=>({color: isActive ? "red" :
"black"}})}>
                Deals
            </NavLink>

            <NavLink
                to="/cartpage"
                style={({isActive})=>({color: isActive ? "red" :
"black"}})}>
                    Cart
                </NavLink>
            </nav>
        );
    };

export default Navbar;

```

App.jsx

```

import { BrowserRouter, Route, Routes } from "react-router-dom"
import CartPage from "../Session9/CartPage"
import DealsPage from "../Session9/DealsPage"
import HomePage from "../Session9/HomePage"
import Navbar from "../Session9/Navbar"
import NoPage from "../Session9/NoPage"

const App = () => {
    return (
        <div>
            <BrowserRouter>
                <Navbar />
                <Routes>

```

```
        <Route path="/" element={<HomePage/>}></Route>
        <Route path="/cartpage" element={<CartPage/>}></Route>
        <Route path="/dealspage"
element={<DealsPage/>}></Route>
        <Route path="/*" element={<NoPage/>}></Route>
    </Routes>
  </BrowserRouter>
</div>
)
}

export default App
```
