

Session 13.

1.Run npm run build in your React project folder and verify that a build folder is created with optimized production files.

2.Sign up for a free Netlify account, connect your GitHub account, and deploy a simple React app (not the one built in class) from a new GitHub repository using Netlify's dashboard.

Hint: Make sure your repository has the build folder generated by npm run build before deploying.

3.Update the homepage field in your package.json to a custom URL (e.g., https://yourname-musicplayer.netlify.app), rebuild your React app using npm run build, and redeploy to Netlify to verify that routes work correctly.

Hint: This helps avoid routing issues in SPAs when deployed.

4.Add a new feature to your deployed React app, such as a dark mode toggle or a new About page, then redeploy the updated build to Netlify and confirm the changes are live.

5.After deploying your React app to Netlify, share the live URL with a friend and ask them to open it on their phone. Collect their feedback on loading speed and appearance, and write two changes you would make to improve user experience.

Answer:-

1. Generate a Production Build

Open your React project in the terminal and run:

npm run build

Verification

You should see a message similar to:

2.Deploy a React App to Netlify

Create a New Repository

1. Create a new React project.
2. Initialize Git:
 - **git init**

3. Push to GitHub:

- `git add .`
- `git commit -m "Initial Commit"`
- `git branch -M main`
- `git remote add origin https://github.com/yourusername/react-demo.git`
- `git push -u origin main`

Create Netlify Account

Visit: [Netlify.app](https://netlify.app)

Deploy Steps

- Login to Netlify.
- Click Add New Site → Import Existing Project.
- Connect GitHub.
- Select your repository.
- Configure:
 - Build Command: `npm run build`
 - Publish Directory: `build`
- Click Deploy Site.

Example Live URL :- <https://react-demo-project.netlify.app>

4. Update Homepage Field and Redeploy

package.json

```
{
  "name": "music-player",
  "version": "1.0.0",
  "homepage": "https://yourname-musicplayer.netlify.app"
}
```

Rebuild

`npm run build`

Push changes:-

```
git add .  
git commit -m "Updated homepage URL"  
git push
```

Netlify automatically redeploys.

Verify

Check: - <https://yourname-musicplayer.netlify.app>

Verify:

Home page loads correctly.

Refreshing routes does not break navigation.

Static assets load properly.

```
import { useState } from "react";  
  
function App() {  
  const [darkMode, setDarkMode] = useState(false);  
  
  return (  
    <div  
      style={{  
        background: darkMode ? "#111" : "#fff",  
        color: darkMode ? "#fff" : "#000",  
        minHeight: "100vh"  
      }}  
    >  
      <button onClick={() => setDarkMode(!darkMode)}>  
        Toggle Theme  
      </button>  
  
      <h1>My React App</h1>  
    </div>  
  );  
}  
  
export default App;
```

Redeploy

```
git add .  
git commit -m "Added dark mode"  
git push
```

5. User Feedback and UX Improvements

Example Feedback

Friend's Feedback (Mobile Device)

Website loaded quickly.

Layout looked clean.

Buttons were slightly small on mobile.

Text felt crowded in some sections.

Improvements Based on Feedback

Improvement 1: Larger Touch Targets

Increase button size for mobile users.
